

Make a Census Explorer with Shiny

Ari Lamstein - AriLamstein.com
R-ladies, July 2015

Part I

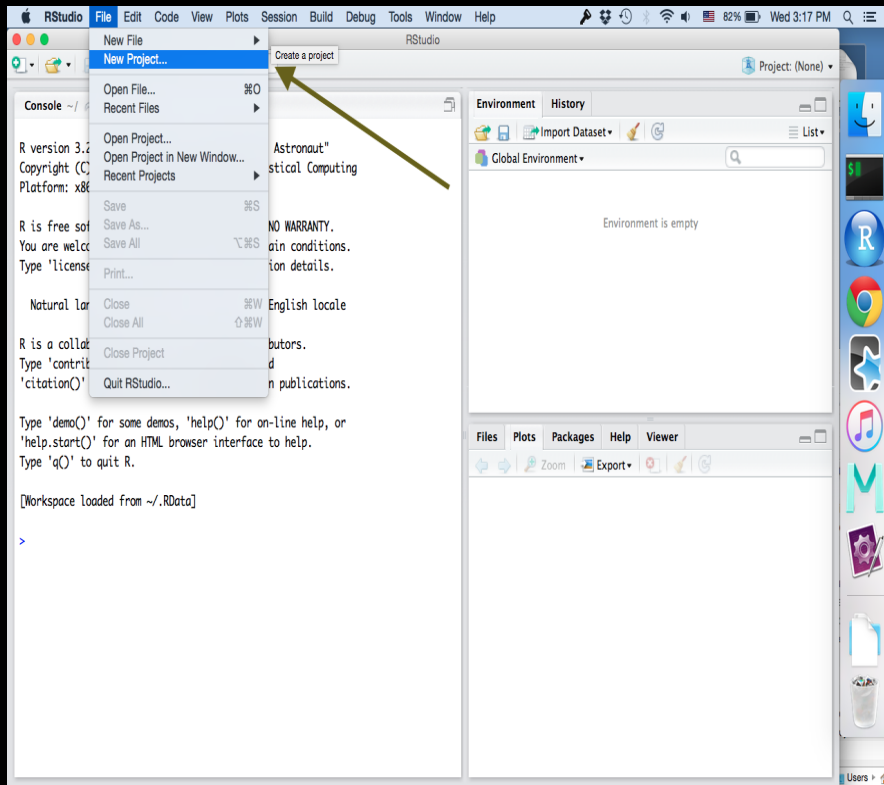

Default Shiny App

What is Shiny?

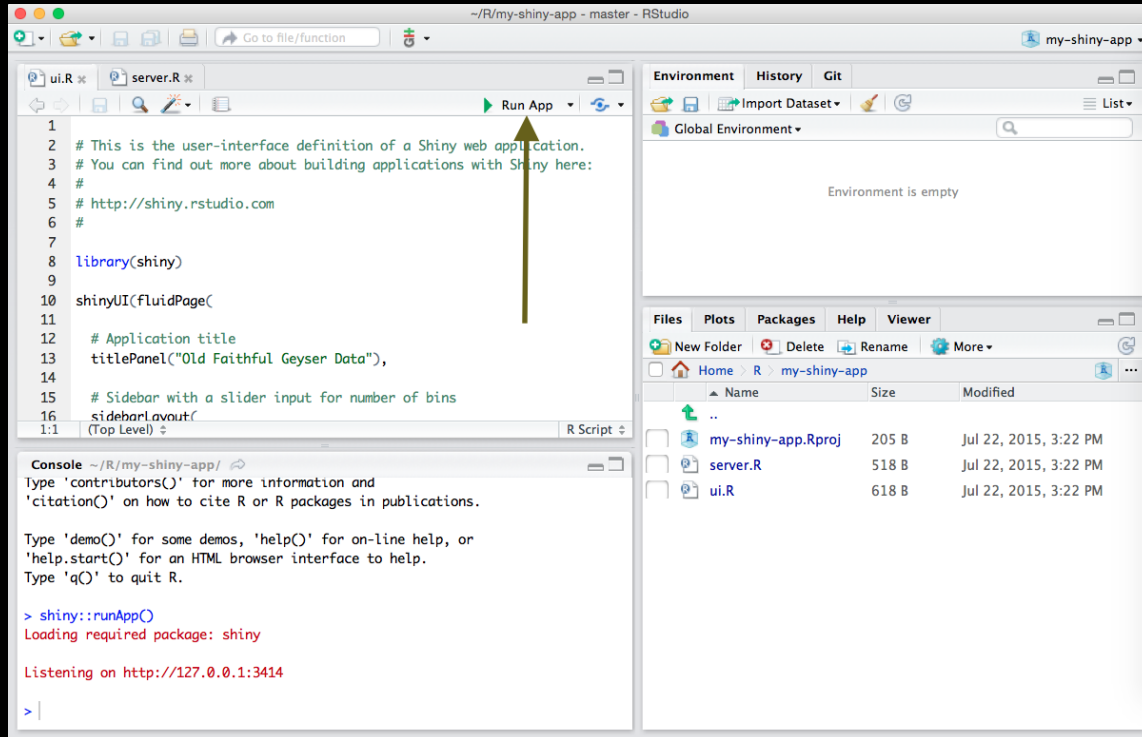

- Web apps in R
- Great for exploration
- Two files:
 - ui.R
 - server.R

Create

Run

The screenshot shows the RStudio interface with a Shiny application being run. The main editor window displays the R script for the application, which includes comments and code for the user interface and server logic. A yellow arrow points to the 'Run App' button in the top right of the editor. The console window at the bottom shows the output of the 'runApp()' function, indicating that the application is listening on http://127.0.0.1:3414.

```
1  
2 # This is the user-interface definition of a Shiny web application.  
3 # You can find out more about building applications with Shiny here:  
4 #  
5 # http://shiny.rstudio.com  
6 #  
7  
8 library(shiny)  
9  
10 shinyUI(FluidPage(  
11  
12 # Application title  
13 titlePanel("Old Faithful Geyser Data"),  
14  
15 # Sidebar with a slider input for number of bins  
16 sidebarLayout(  
1:1 (Top Level) )  
R Script
```

Part 2

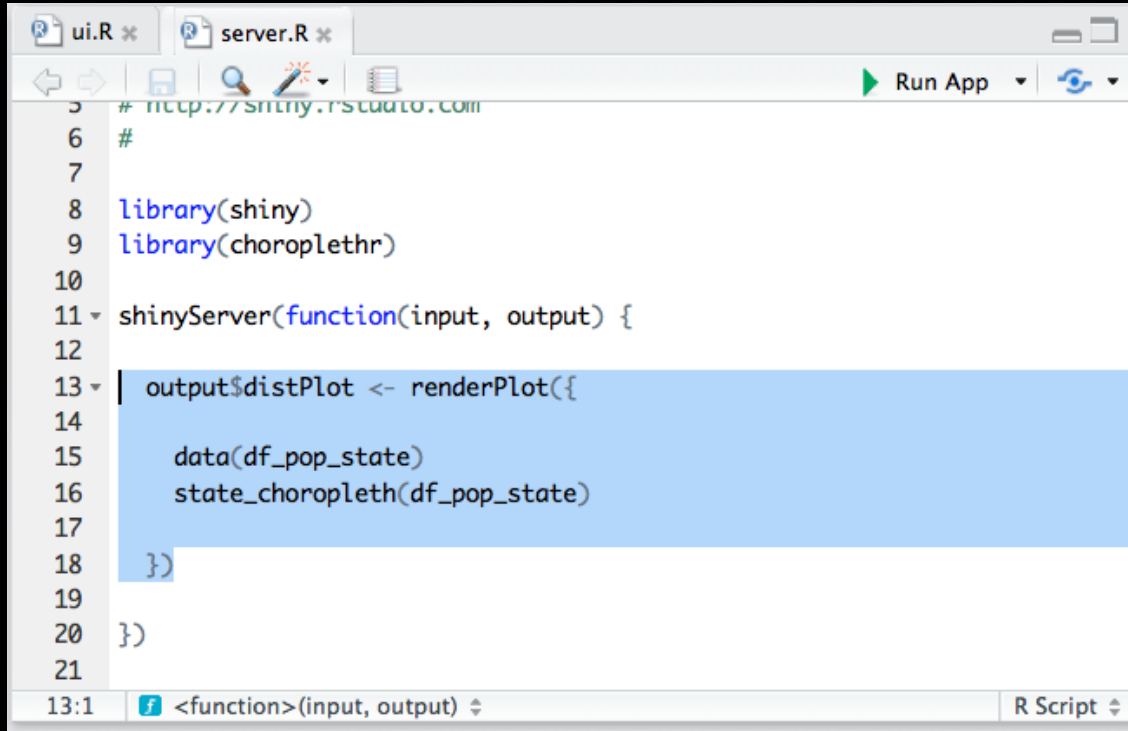

Default Shiny App -> Static Maps

Population Map - No Shiny

```
library(choroplethr)
data(df_pop_state)
state_choropleth(df_pop_state)
```

Population Map - Shiny

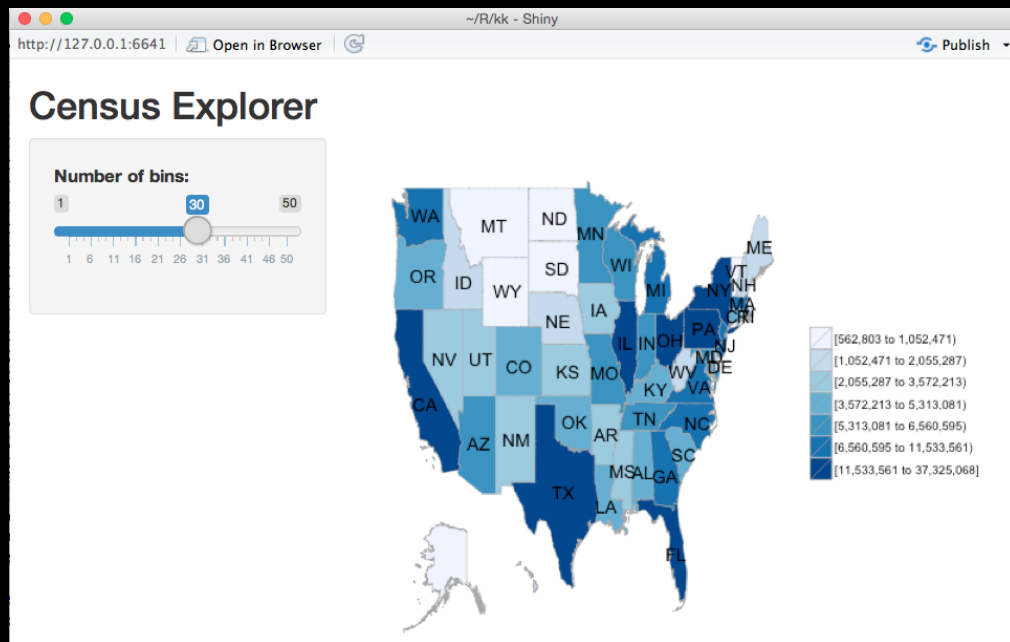

```
1 # http://shiny.rstudio.com
2 #
3
4 library(shiny)
5 library(choroplethr)
6
7 shinyServer(function(input, output) {
8
9   output$distPlot <- renderPlot({
10     data(df_pop_state)
11     state_choropleth(df_pop_state)
12   })
13 })
```

13:1  <function>(input, output) R Script

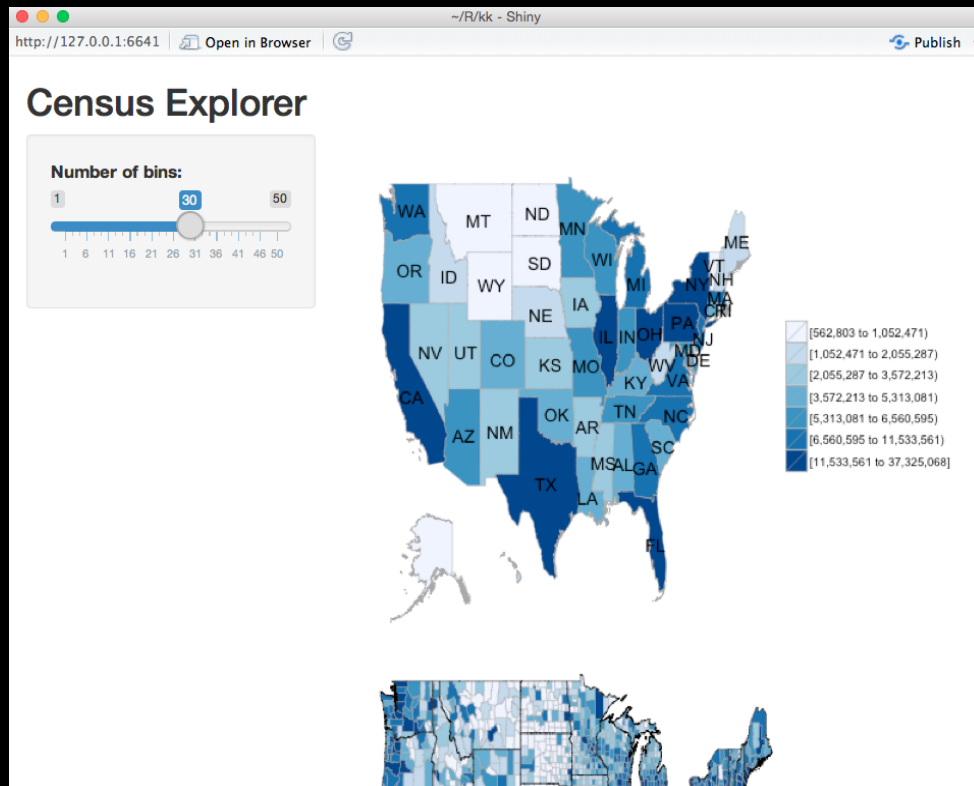

Exercise: Change the App's title

Hint: is this in ui.R or server.R?

Exercise: Add a County Map!

```
data(df_pop_county)
county_choropleth(df_pop_county)
```

My Solution

ui.R

```
26   mainPanel(  
27     plotOutput("distPlot"),  
28     plotOutput("county")|
```

server.R

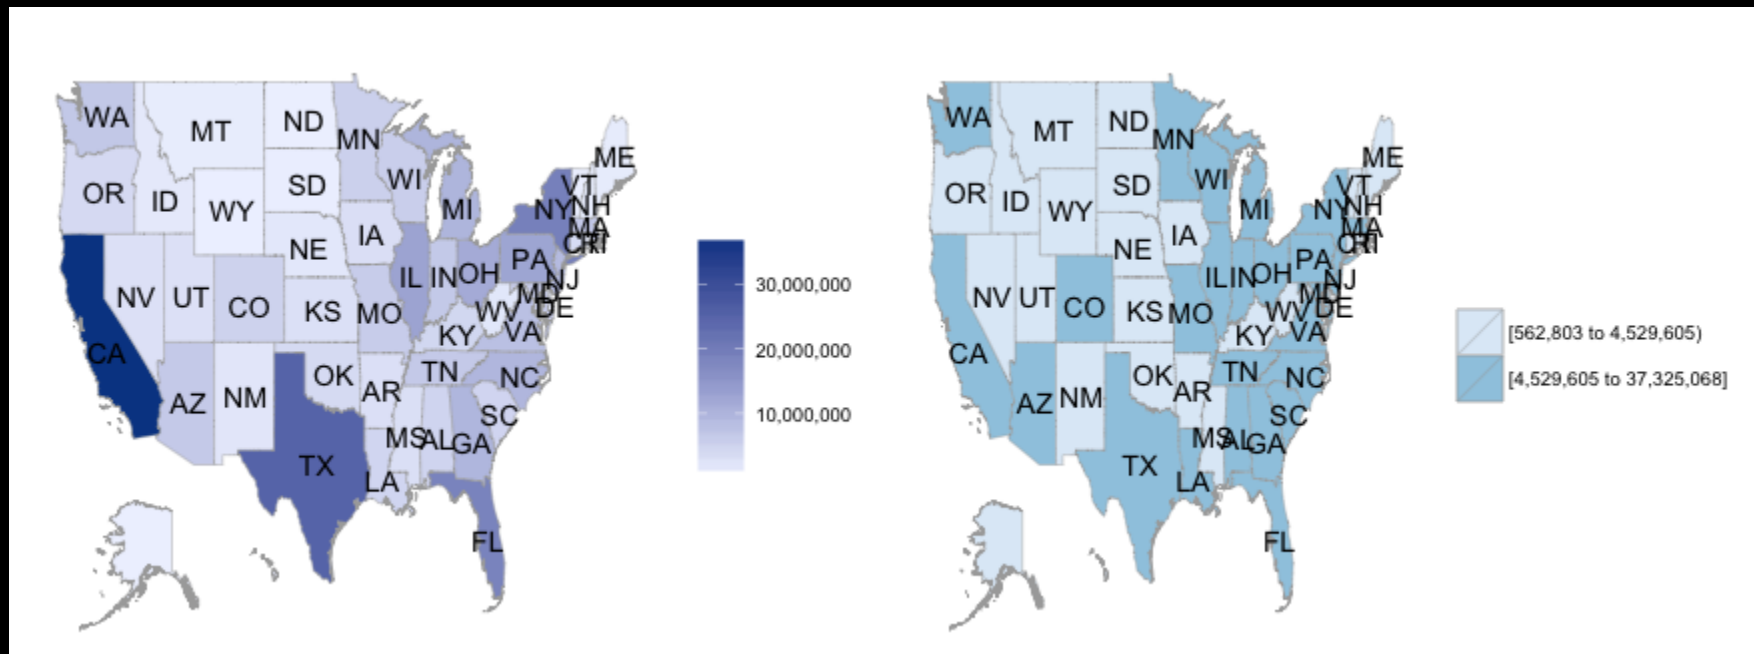

```
11 ▾ shinyServer(function(input, output) {  
12  
13 ▾   output$distPlot <- renderPlot({  
14  
15     data(df_pop_state)  
16     state_choropleth(df_pop_state)  
17  
18   })  
19  
20 ▾   output$county = renderPlot({  
21     data(df_pop_county)  
22     county_choropleth(df_pop_county)  
23   })  
24  
25 })
```

Part 3

Basic Interaction

num_colors=1, num_colors=2, ...

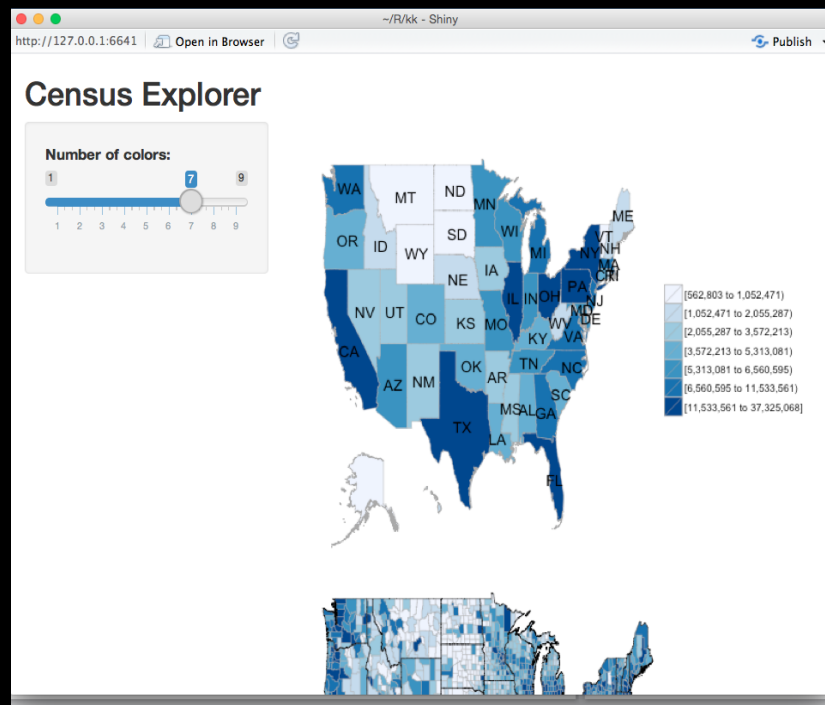

state_choropleth(df_pop_state, num_colors=1)

ui.R Code for Slider

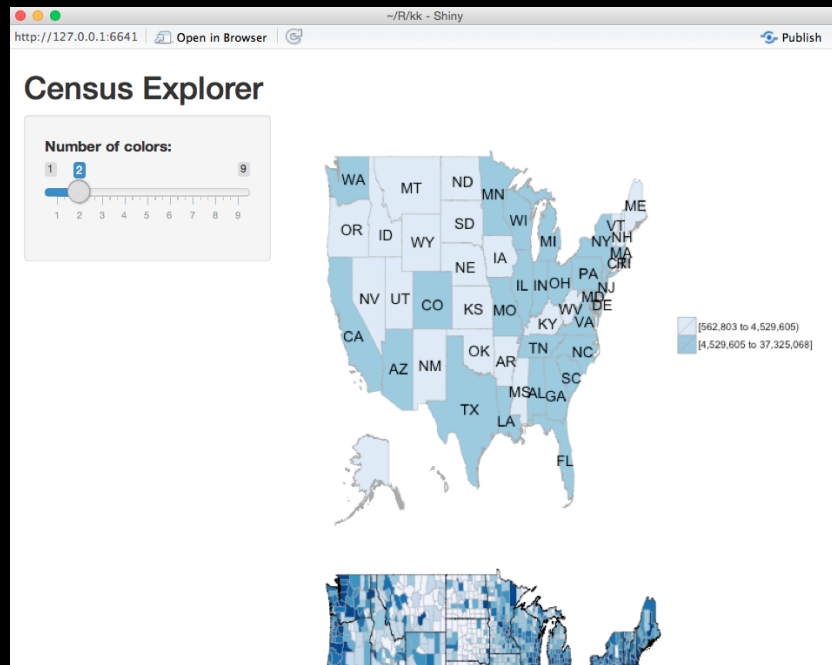

```
9
10 shinyUI(fluidPage(
11   # Application title
12   titlePanel("Census Explorer"),
13
14   # Sidebar with a slider input for number of colors
15   sidebarLayout(
16     sidebarPanel(
17       sliderInput("num_colors",
18         "Number of colors:",
19         min = 1,
20         max = 9,
21         value = 7)
22     ),
23   ),
24 )
```

18:1 (Top Level) R Script

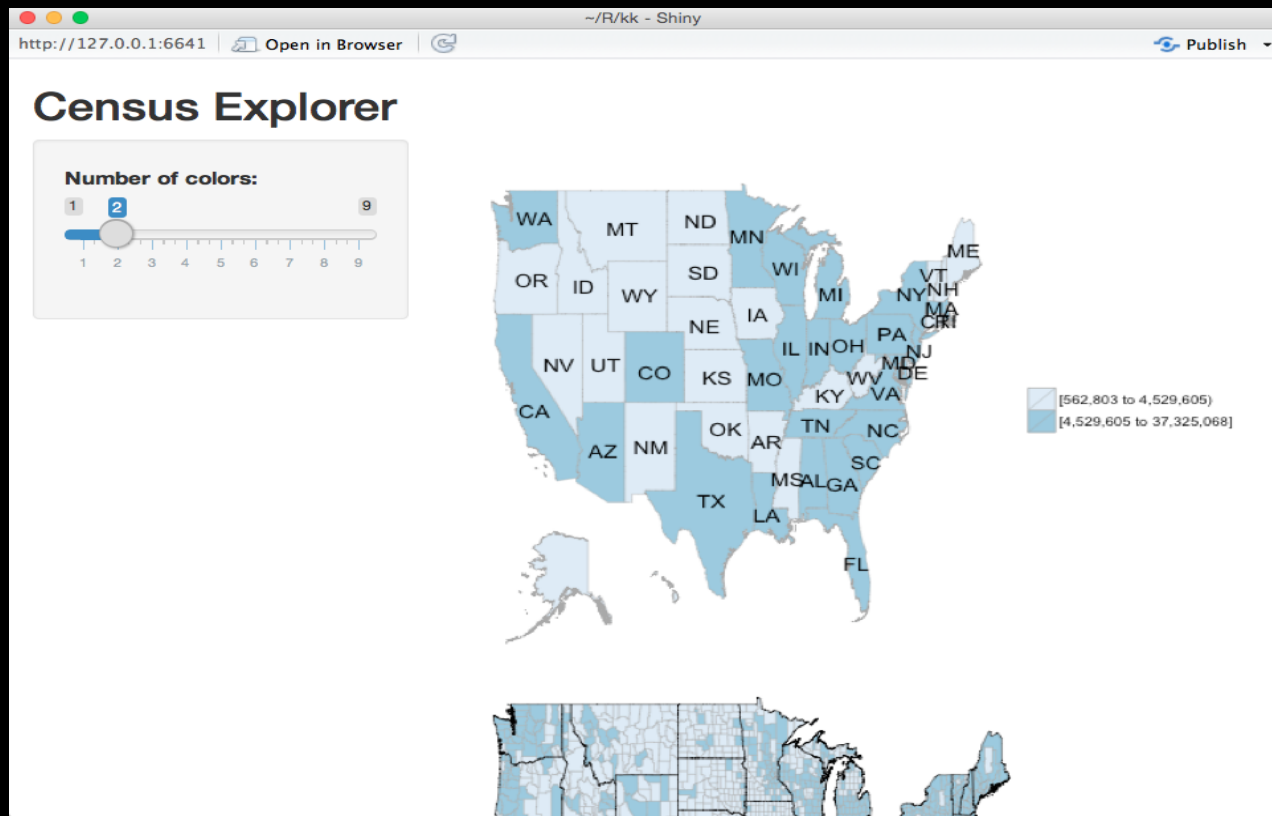

server.R Code for Slider

```
shinyServer(function(input, output) {  
  
  output$distPlot <- renderPlot({  
  
    data(df_pop_state)  
    state_choropleth(df_pop_state, num_colors = input$num_colors)  
  
  })  
})
```

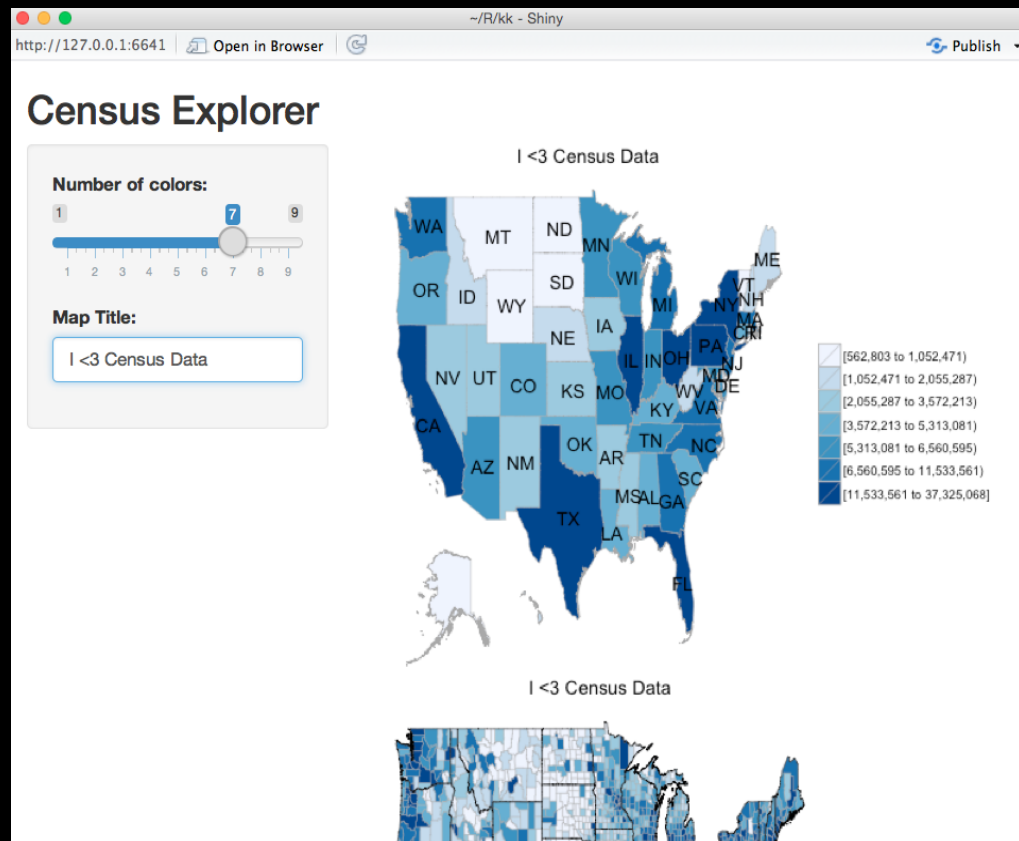

Exercise: Slider for County Map

Exercise: Let users add a title

UI hint: `?textInput`

Server hint: `?state_choropleth`

My Solution

ui.R

```
# Sidebar with a slider input for number of colors
sidebarLayout(
  sidebarPanel(
    sliderInput("num_colors",
               "Number of colors:",
               min = 1,
               max = 9,
               value = 7),
    textInput("title",
              "Map Title:")
```

server.R

```
11 shinyServer(function(input, output) {
12
13   output$distPlot <- renderPlot({
14
15     data(df_pop_state)
16     state_choropleth(df_pop_state,
17                     num_colors = input$num_colors,
18                     title = input$title)
19
20   })
```

Part 4

Multiple Demographics

Demographic Data

```
> data(df_state_demographics)
```

```
> colnames(df_state_demographics)
```

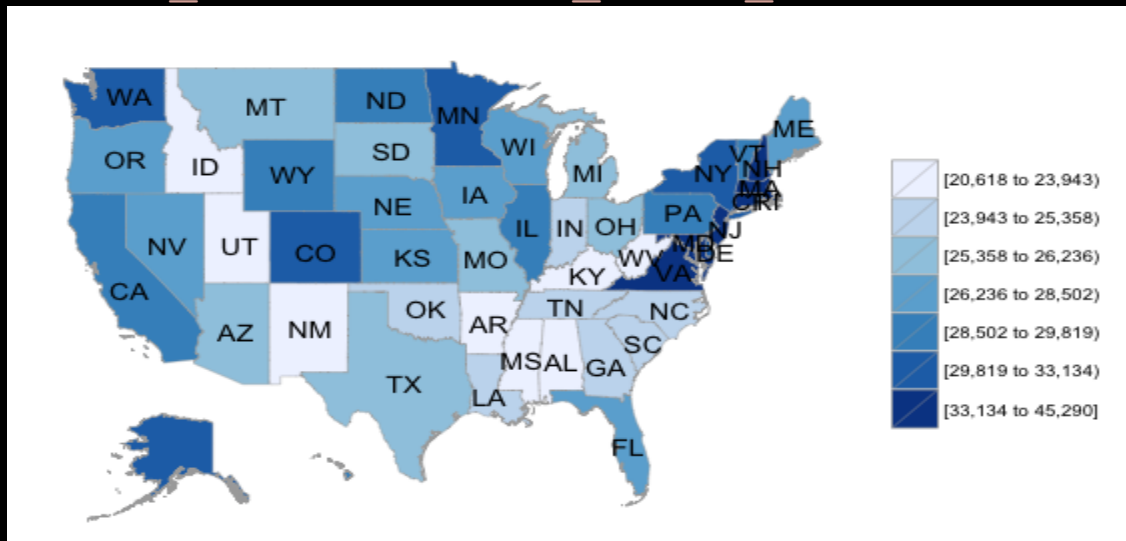

```
[1] "region" "total_population" "percent_white" "percent_black"  
"percent_asian" "percent_hispanic" "per_capita_income" "median_rent"  
"median_age"
```

```
> df_state_demographics[1:4, 1:4]
```

	region	total_population	percent_white	percent_black
1	alabama	4799277	67	26
2	alaska	720316	63	3
3	arizona	6479703	57	4
4	arkansas	2933369	74	15

Demographic Maps

```
df_state_demographics$value =  
  df_state_demographics$per_capita_income  
state_choropleth(df_state_demographics)
```

ui.R - Dropdown

```
4 data(df_state_demographics, package="choroplethr")
5 demographic_choices = colnames(df_state_demographics)[2:ncol(df_state_demographics)]
6
```

```
12 sidebarLayout(
13   sidebarPanel(
14     selectInput("demographic",
15               label = "Select demographic",
16               choices = demographic_choices,
17               selected = "total_population"),
18
```

Result

Census Explorer

Select demographic

total_population

total_population

Press the Blue Button

Requires an account on ShinyApps.io (free)

The screenshot shows the RStudio IDE with several tabs open: 'ui.R', 'server.R', 'ui.R', 'server.R', and 'Untitled1*'. The 'Untitled1*' tab is active, displaying R code. The code includes a library call for 'choroplethr' and a 'shinyServer' function that uses 'renderPlot' to display choropleth maps of state demographics and county data. A green triangle icon labeled 'Run App' is visible in the top right of the editor window. A blue circular icon with a white refresh symbol is located to the right of the 'Run App' button. A yellow arrow points from the bottom right towards the blue circular icon.

```
9 library(choroplethr)
10
11 shinyServer(function(input, output) {
12
13   output$distPlot <- renderPlot({
14
15     data(df_state_demographics)
16     df_state_demographics$value = df_state_demographics[, input$demographic]
17     state_choropleth(df_state_demographics,
18                     num_colors = input$num_colors,
19                     title      = input$title)
20   })
21
22   output$county <- renderPlot({
23
24     data(df_county_demographics)
25     df_county_demographics$value = df_county_demographics[, input$demographic]
26     county_choropleth(df_county_demographics,
27                      num_colors = input$num_colors,
28                      title      = input$title)
29   })
30 })
```
